

Managed Ethernet

Delivering Business-Grade IP Solutions

Reliable
Flexible
Scalable

Endless Possibilities at Groundbreaking Speed ~ Business-Grade Ethernet Technology

Reliability

Ethernet has become the preferred transport communications technology for business of all sizes with deployment throughout the world. It is a proven and mature technology that is based on a standard protocol approved by the IEEE. By using multi-paired delivery from our network to your location, redundancy will significantly increase while service interruption will drastically decrease.

Scalability

As a highly scalable and cost-effective alternative to traditional broadband access options, our Managed Ethernet solution offers bandwidth range from 5 Mbps of service up to 45 Mbps. Additional bandwidth requirements can be easily added in a matter of days because we use a standard Ethernet (10/100Mbps) handoff from our network to your location.

Flexibility

Telekenex Managed Ethernet is the perfect solution for every business type and size because of its flexible provisioning and ability to support both Internet connectivity and point-to-point connections. Managed Ethernet delivers a tailored solution to your business and can easily adapt to your changing business needs. The circuit can be easily segmented to support different advanced services such as IP Telephony, video conferencing, and data storage.

Benefits you can't believe...

- Revolutionary speed at unbelievable price
- Simple and quick implementation
- Reduce performance bottlenecks
- Increased redundancy using multi-paired delivery
- Eliminate investment in other broadband access
- No additional CPE to purchase
- No bandwidth oversubscription
